

Thursday, August 24, 1882. Mrs. D. E. STAINBACK, Editors.

FASHION FANCIES.

Waists grow longer. Network corsets should be worn in summer.

Yellow maintains its sway as a favorite color. Mountain suits and fatigue costumes are very short.

Enamelled jewelry seems to be gaining ground again. Chenille bids fair to have a long run of popular favor.

Louis XV. dresses are in high favor for garden parties. The fashion of bouffant sleeves for full dress is gaining.

High pleated collars resembling collarettes will be much worn. Very few first-class society women of New York wear tournures.

Old tapestry shades of color are most in favor for summer toilets. Woolen dresses, to be tasteful, should be made as plain as possible.

Floors and cascades of Oriental lace are worn on every dressy toilet. Chemises are made with a V front, to be worn with V-front dress bodies.

The lace veu, so popular this summer, will be reduced to a full ruche by fall. Lace and embroidery remain the favorite trimmings for all kinds of dresses.

Picelle net will cover the collars and cuffs of many dressy costumes in the fall. Magnolia white is a charming tint for the rich silks and satins of evening dresses.

Most evening dresses worn at watering places are white, pale blue, or shell or shrimp pink. The wraps adopted by young American girls abroad are of masculine cut and tailor finish.

Pompons and orrich feathers form the trimmings of the largest number of summer dress hats. White blouse waists are worn under long, loose jackets for ascetic and mountain fatigue costumes.

Immease hats of drawn or shirred crape, mull and velveteen are worn at European seaside resorts. Large foulard fans, used instead of parasols and matching the costume, are the latest Parisian novelty.

The princess pelisse, a long overgarment of India pongee, is useful as a traveling cloak. It is bordered with a chieocree ruche. The favorite glove and long mitt of the dressy girl is of silk or undressed kid in Pompeian red or deep terra cotta color.

Nothing more hideous can be conceived than the bouffant tournures of crinoline which the French modistes are bringing in vogue. The sash panier, terminating behind with a long-looped bow, is more popular than the festooned drapery that curves upward in front.

The half-fitting princess dress, with its superimposed draperies, flounces and trimmings, holds its ground for children's dresses. The striped cadet-blue gingham, with plaitings showing the darkest stripe on top of each pleat, are pretty for morning dresses in the country.

White pique waistcoats, with collars rolling over the velvet or cloth collar of tailor-made jackets, are much worn by young girls on the other side. Light ecru canvass boots and shoes, foxed with yellow leather, are worn for mountain climbing, and also do duty for lawn tennis and croquet wear.

White dresses have occasionally the entire skirt covered with narrow flounces of Oriental lace. The basque is then trimmed with lace ruffles and cascades. Even Worth has gone stark mad over that ugly modistosity, the tournure; but he has little influence over the English aesthetes and their American consins.

It is proposed that ladies should adopt the Turkish style of wearing their veils next winter—that is over the mouth, chin and nose, instead of the eyes. Ivory-white surah dresses for summer evening parties have the skirt covered with flounces of Venetian embroidery, imitating the designs of old point lace. Large collarettes and shoulder capes of lace and embroidery are much worn. A new fancy is to decorate profusely all around with ribbons. popular dresses for tereon at mountain shmere, in any of the ies of color, with a sash bow of ss material is white and kes of steel. ozenges of uong the present aring s of es, in

I have no heart which thine shouldst be. Though I thine own would win, For that which may be offered thee Must know no taint of sin.

And though love fits the maiden's breast As perfume does the flower, Thine own would only know unrest If brought in passion's power.

Even as the little plant whose grace Buds in the tender gloom, If brought to bear the sun's hot face, Its home becomes its tomb. RICHARD J. HEMMING.

FARM NOTES.

Give free circulation of air in the stables at this season. Corn is just what hogs should not have at the present time.

Two small hogs, maturing early, are more profitable than one large one. A good hog may be produced by crossing the Suffolk and Chester White.

Feed vegetables to stock freely, and keep fresh water always within reach. A good cow should have a large muzzle, large paunch, large milk veins and large udder.

The best butter from grass is further improved by feeding the cows a little corn meal. Strawberries are usually much more prolific when several varieties are planted together.

Disease does not shorten wool, but causes irregularities in texture, and lessens its strength and value. It is said to be more profitable to dispose of cattle at 2 years old than to keep them until they are 3 years old.

Rubbing the horse morning and noon with a handful of smartweed will prevent the flies from troubling him during the day. Where worms infest flower pots they may be driven out by mixing an ounce of ammonia in a gallon of water and sprinkling it over the earth.

Chicago is getting more sheep than ever before. They are arriving at the rate of 15,000 to 20,000 per week and the demand is also the best ever known. Startling as the statement may seem the destruction of crops by noxious insects in the United States has reached the enormous sum of \$400,000,000 in a year.

Statistics show that disease and old age killed 5 per cent of the sheep of Georgia during the year ending June 1, while the dogs destroyed nearly 10 per cent of the flocks. One Georgia farmer has 24,000 sweet potatoes plants set out in three and a half acres of ground, and says that the product will be more valuable than that of twenty acres of the best cotton.

CULTURE OF BARLEY.

[Correspondence Country Gentleman.] The best soil to grow wheat is also the best for barley. This is a rich clay loam, both plants requiring compactness and firmness of mould. Light soil, whether of a peaty or sandy character, will not do; neither will sod, nor any ground charged lightly with vegetable material. On the homestead barley was largely grown and tried on all kinds of soil. Sometimes it would succeed on sod, producing a very heavy growth, but usually the berry was lighter and the straw weaker and more disposed to lodge than on the same soil if stubble or fallow, especially in a moist season. Besides, my experience is that it matures unevenly on sod ripe grain and grain in the milk condition at the same time. Like wheat, barley is a hardy plant, doing best in a cool climate. It is, therefore, adapted to early sowing, and this it requires so as to mature before the heat of advanced summer sets in, which, in connection with drought, is always a serious hurt to this grain. I have known in severe cases a total loss of the crop. All this is avoided by sowing early in the spring. It can be hardly put out too early in this latitude if the ground is mellow and dry enough. This will fit it to be cut about the beginning of July—the straw bright and strong and the berry plump I fear, although a hardy plant like wheat, fine, compact mould, clean and well enriched, but thorough drainage. A hoed crop, if kept clean, is a good preparation, in general needing only cultivating and narrowing in the spring (no ploughing) before sowing. Sow a bushel and a peck broadcast per acre, and cover with a smoothing harrow—or a bushel if drilled in, if the ground is rich, as it should be. Few, if any, grains require such careful treatment of the soil as barley, but the benefit in the crop will be proportionate, and the land will be left in good condition for a succeeding crop, which with us has usually been oats. It is also in excellent condition to seed down when the barley is sown, this being a favorable crop for that purpose. As to harvesting, there are various ways. The point to have in view is to secure as bright and plump a berry as possible, avoiding, therefore, over-ripeness and immaturity, and cutting when the berry is bright and somewhat hard. As soon as wilted and dry outside, put in small cocks, covering with the hay-cap, and keep till cured, when both straw and berry will show a clean, light-yellow color.

PLAIN TRUTHS

The blood is the foundation of life, it circulates through every part of the body, and unless it is pure and rich, good health is impossible. If disease has entered the system the only sure and quick way to drive it out is to purify and enrich the blood.

These simple facts are well known, and the highest medical authorities agree that nothing but natural condition; and also that all the iron preparations hitherto made blacken the teeth, cause headache, and are otherwise injurious. Brown's Iron Bitters will thoroughly and quickly assimilate with the blood, purifying and strengthening it, and thus drive disease from any part of the system, and it will not blacken the teeth, cause headache or constipation, and is positively not injurious.

Save his Child. 17 N. Eutaw St., Baltimore, Md. Feb. 12, 1880. Gentl—Upon the recommendation of a friend I tried Brown's Iron Bitters as a tonic and restorative for my daughter, whom I was thoroughly convinced was suffering away with Consumption. Having lost three daughters by the terrible disease, under the care of eminent physicians, I was led to believe that anything could arrest the progress of the disease, but to my great surprise, before my daughter had taken one bottle of Brown's Iron Bitters, she began to mend and now is quite restored to former health. A fifth daughter began to show signs of Consumption, and when the physician was consulted he quickly said "Tonics were required," and when informed that the elder sister was taking Brown's Iron Bitters, responded "that is a good tonic, take it." ADORAM PHILBS.

Brown's Iron Bitters effectually cures Dyspepsia, Indigestion and Weakness, and renders the greatest relief and benefit to persons suffering from such wasting diseases as Consumption, Kidney Complaints, etc.

With such assistant instructors as the exigencies of the School may require. The chief work of the School is done by the Senior Principal and his two sons. The less important work is given to assistant instructors, who are selected with especial reference to their peculiar fitness for the duties assigned them; and the number of students will not be increased beyond the capacity of the Principal to take personal charge of all the classes in the leading branches taught, and to supervise all the work of the School. The School has been under its present management for more than TWENTY YEARS, and in this sense, it is, we believe, the oldest school in the South. As several of the Cadets will leave for College, there will be room next Session for about twenty new students. For Catalogue apply to the Principals, J. H. & J. C. HORNER.

As several of the Cadets will leave for College, there will be room next Session for about twenty new students. For Catalogue apply to the Principals, J. H. & J. C. HORNER.

With such assistant instructors as the exigencies of the School may require. The chief work of the School is done by the Senior Principal and his two sons. The less important work is given to assistant instructors, who are selected with especial reference to their peculiar fitness for the duties assigned them; and the number of students will not be increased beyond the capacity of the Principal to take personal charge of all the classes in the leading branches taught, and to supervise all the work of the School. The School has been under its present management for more than TWENTY YEARS, and in this sense, it is, we believe, the oldest school in the South. As several of the Cadets will leave for College, there will be room next Session for about twenty new students. For Catalogue apply to the Principals, J. H. & J. C. HORNER.
